**Introduction to Chemicals from Biomass** James H. Clark, Fabien Deswarte, 2014-12-22 Introduction to Chemicals from Biomass, Second Edition presents an overview of the use of biorenewable resources in the 21st century for the manufacture of chemical products, materials and energy. The book demonstrates that biomass is essentially a rich mixture of chemicals and materials and, as such, has a tremendous potential as feedstock for making a wide range of chemicals and materials with applications in industries from pharmaceuticals to furniture. Completely revised and updated to reflect recent developments, this new edition begins with an introduction to the biorefinery concept, followed by chapters addressing the various types of available biomass feedstocks, including waste, and the different pre-treatment and processing technologies being developed to turn these feedstocks into platform chemicals, polymers, materials and energy. The book concludes with a discussion on the policies and strategies being put in place for delivering the so-called Bioeconomy. Introduction to Chemicals from Biomass is a valuable resource for academics, industrial scientists and policy-makers working in the areas of industrial biotechnology, biorenewables, chemical engineering, fine and bulk chemical production, agriculture technologies, plant science, and energy and power generation. We need to reduce our dependence on fossil resources and increasingly derive all the chemicals we take for granted and use in our daily life from biomass - and we must make sure that we do this using green chemistry and sustainable technologies! For more information on the Wiley Series in Renewable Resources, visit [www.wiley.com/go/rrs](http://www.wiley.com/go/rrs) Topics covered include: • The biorefinery concept • Biomass feedstocks • Pre-treatment technologies • Platform molecules from renewable resources • Polymers from bio-based monomers • Biomaterials • Bio-based energy production Praise for the 1st edition: "Drawing on the expertise of the authors the book involves a degree of plant biology and chemical engineering, which illustrates the multidisciplinary nature of the topic beautifully" - Chemistry World

**The Empowered University** Freeman A. Hrabowski III, 2019-11-12 A practical and hopeful examination of how colleges and universities can create the best possible experience for students and faculty. There are few higher education leaders today that command more national respect and admiration than Freeman A. Hrabowski III, the outspoken president of the University of Maryland, Baltimore County. Named one of America's Best Leaders by US News & World Report and one of

Time's 100 Most Influential People in the World, Hrabowski has led a community transformation of UMBC from a young, regional institution to one of the nation's most innovative research universities. In *The Empowered University*, Hrabowski and coauthors Philip J. Rous and Peter H. Henderson probe the way senior leaders, administrators, staff, faculty, and students facilitate academic success by cultivating an empowering institutional culture and broad leadership for innovation. They examine how shared leadership enables an empowered campus to tackle tough issues by taking a hard look in the mirror, noting strengths and weaknesses while assessing opportunities and challenges. The authors dig deeply into these tough issues in higher education ranging from course redesign to group-based and experiential learning, entrepreneurship and civic engagement, academic inclusion, and faculty diversity. The authors champion a holistic approach to student success, focusing on teaching and learning while offering an array of financial, social, and academic supports for students of all backgrounds. Throughout the book, the authors emphasize the important role of analytics in decision-making. They also explore how community members and senior leaders can work together to create an inclusive campus through a more welcoming and supportive racial climate, improved Title IX processes, and career support for faculty of all backgrounds. Ultimately, *The Empowered University* is as much a case study of the authors' work as it is an examination of institutional change, inclusive excellence, and campus-community partnerships. Arguing that higher education can play a unique role in addressing the fundamental divisions in our society and economy by supporting individuals in reaching their full potential, the authors have developed a provocative guide for higher education leaders who want to promote healthy and productive campus communities.

**Regulation of Genome Editing in Plant Biotechnology** Hans-Georg Dederer, David Hamburger, 2019-08-16 This book provides in-depth insights into the regulatory frameworks of five countries and the EU concerning the regulation of genome edited plants. The country reports form the basis for a comparative analysis of the various national regulations governing genetically modified organisms (GMOs) in general and genome edited plants in particular, as well as the underlying regulatory approaches. The reports, which focus on the regulatory status quo of genome edited plants in Argentina, Australia, Canada, the EU, Japan and the USA, were written by distinguished experts following a uniform structure. On this basis, the

legal frameworks are compared in order to foster a rational assessment of which approaches could be drawn upon to adjust, or to completely realign, the current EU regime for GMOs. In addition, a separate chapter identifies potential best practices for the regulation of plants derived from genome editing.

**WHO Recommendations for Prevention and Treatment of Maternal Peripartum Infections** World Health Organization, 2016-02-12 The goal of the present guideline is to consolidate guidance for effective interventions that are needed to reduce the global burden of maternal infections and its complications around the time of childbirth. This forms part of WHO's efforts towards improving the quality of care for leading causes of maternal death especially those clustered around the time of childbirth in the post-MDG era. Specifically it presents evidence-based recommendations on interventions for preventing and treating genital tract infections during labour childbirth or puerperium with the aim of improving outcomes for both mothers and newborns. The primary audience for this guideline is health professionals who are responsible for developing national and local health protocols and policies as well as managers of maternal and child health programmes and policy-makers in all settings. The guideline will also be useful to those directly providing care to pregnant women including obstetricians midwives nurses and general practitioners. The information in this guideline will be useful for developing job aids and tools for both pre- and inservice training of health workers to enhance their delivery of care to prevent and treat maternal peripartum infections.

*State of the World 2011* Worldwatch Institute, 2011-12-24 Over the last two years, Worldwatch's Nourishing the Planet team has travelled to 25 sub-Saharan African nations - the places where hunger is greatest - and uncovered a treasure trove of innovations from farmers groups, private voluntary organizations, universities, and even agribusiness companies. These innovations offer global benefits - from the continent's role in preventing disastrous climate change to the way urban farmers are feeding people in cities and why even determined locavores are sustained by the crop diversity preserved by farmers thousands of miles away. This book assesses the state of agricultural innovations from cropping methods to irrigation technology to agricultural policy with an emphasis on sustainability, diversity, and ecosystem health in the hope of guiding governments, foundations, and concerned citizens in their efforts to eradicate hunger and poverty. Published annually in 28 languages, *State of the World* is long established as the most authoritative and accessible annual guide to our progress towards a sustainable future. It is relied upon by national governments, UN agencies, development workers and law-makers for its up-to-the-minute analysis and information.

**Adenosine Receptors in Health and Disease** Constance N. Wilson, S. Jamal Mustafa, 2009-07-28 Since their discovery approximately 25 years ago, adenosine receptors have now emerged as important novel molecular targets in disease and drug discovery. These proteins play important roles in the entire spectrum of disease from inflammation to immune suppression. Because of their expression on a number of different cell types and in a number of different organ systems they play important roles in specific diseases, including asthma, rheumatoid arthritis, Parkinson's disease, multiple sclerosis, Alzheimer's disease, heart disease, stroke, cancer, sepsis, and obesity. As a result of intense investigations into understanding the molecular structures and pharmacology of these proteins, new molecules have been synthesized that have high specificity for these proteins and are now entering clinical trials. These molecules will define the next new classes of

drugs for a number of diseases with unmet medical needs.

*Louis Vierne* Rollin Smith, 1999 Louis Vierne (1870-1937), a student of César Franck and Charles-Marie Widor, was organist of the Notre-Dame Cathedral in Paris for 37 years, until his death at the console during a recital. Widor's successor as the organ's great French symphonist - an assessment the passage of time has proved correct - Vierne's music has remained in the repertoire of organists throughout the world, never undergoing the periodic eclipses experienced by his contemporaries. Vierne's autobiography, *Mes Souvenirs*, originally published serially in the 1930s, is here available in a profusely illustrated, extensively annotated English translation. Rollin Smith's *Louis Vierne: Organist of Notre Dame Cathedral* is the first major study of the great organist of Notre-Dame and includes chapters on his American tour, recordings, contemporary reminiscences, definitive textual corrections, the organ symphonies, his death and succession, and a thematic catalogue of his organ works.

*Target Volume Delineation and Treatment Planning for Particle Therapy* Nancy Y. Lee, Jonathan E. Leeman, Oren Cahlon, Kevin Sine, Guoliang Jiang, Jiade J. Lu, Stefan Both, 2017-12-19 This handbook is designed to enable radiation oncologists to treat patients appropriately and confidently by means of particle therapy. The orientation and purpose are entirely practical, in that the focus is on the physics essentials of delivery and treatment planning, illustration of the clinical target volume (CTV) and associated treatment planning for each major malignancy when using particle therapy, proton therapy in particular. Disease-specific chapters provide guidelines and concise knowledge on CTV selection and delineation and identify aspects that require the exercise of caution during treatment planning. The treatment planning techniques unique to proton therapy for each disease site are clearly described, covering beam orientation, matching/patching field techniques, robustness planning, robustness plan evaluation, etc. The published data on the use of particle therapy for a given disease site are also concisely reported. In addition to fully meeting the needs of radiation oncologists, this "know why" and "know how" guide to particle therapy will be valuable for medical physicists, dosimetrists, and radiation therapists.
